

Elm Street Development

APARTMENTS

*Classic stone and metal roof details
highlight planned communities*

Elm Street Development and LeMay Erickson Willcox Architects have collaborated on planned community developments for over 15 years. LeMay Erickson Willcox Architects has assisted in the delivery of over 3,000 units across 10 counties.

These spacious garden-style and mid-rise apartments are graciously appointed with fireplaces, premium amenities, tall ceilings and vaulted loft units. The building exteriors are carefully articulated with inset balconies, hipped roofs and dormers to visually reduce the scale of the buildings and accentuate a sense of home. The contextual masonry is accented by complementary soft warm siding colors, with crisp white trim, window heads and bandboards providing a gracious, timeless design.
