SOUTHERN CALIFORNIA FACILITIES EXPO

MANAGING GREEN BUILDINGS

## Just Announced – Paul Erickson to Keynote at Station Design Conference

Architect Paul Erickson will keynote at the Station Design Conference on Thursday, May 19, in Anaheim Ca. His presentation “Beyond HOT ZONE DESIGN” will challenge convention industry approaches with the latest thinking on designing stations for the health and well-being of the crew.

Architect Paul Erickson

Paul’s expertise is founded in over thirty years of designing fire and rescue stations, and most importantly, his research conducted over the past three years to address ways to reduce the incidence of cancer in the emergency responder community. Paul’s ground breaking article in the August 2014 issue of Firehouse Magazine served as the basis for well received presentations on the topic at the July 2015 Firehouse Expo in Baltimore, MD.

Chief William Pearson

Joining Paul with this updated talk is Chief William Pearson of the City of Atlanta Fire Department. Chief Pearson has been a regular participant at national and regional fire station design conferences and has been responsible for this major metropolitan department’s station design and planning for years.

*"Paul's hot/cold article is shaping NZ design philosophies. However we extend to the decontamination process starting at the incident (i.e. removal of gear before getting back to station.)"*

**PAST ATTENDEE COMMENTS REGARDING ERICKSON'S PRESENTATIONS:**

*"Excellent presentation. Well thought out and presented."*

*"Great info. We need more info like this to get out, so the culture will change"*
